

Certyfikat PMP: Project Team Motivation

A Structured Toolkit for Leadership
and Organizational Psychology

AUTHOR: DR ZBIGNIEW GALAR

Industrial/Agrarian Era

Survival Focus

Motivation was purely necessity:
working to avoid starvation.

Modern Knowledge Work

Self-Actualization Focus

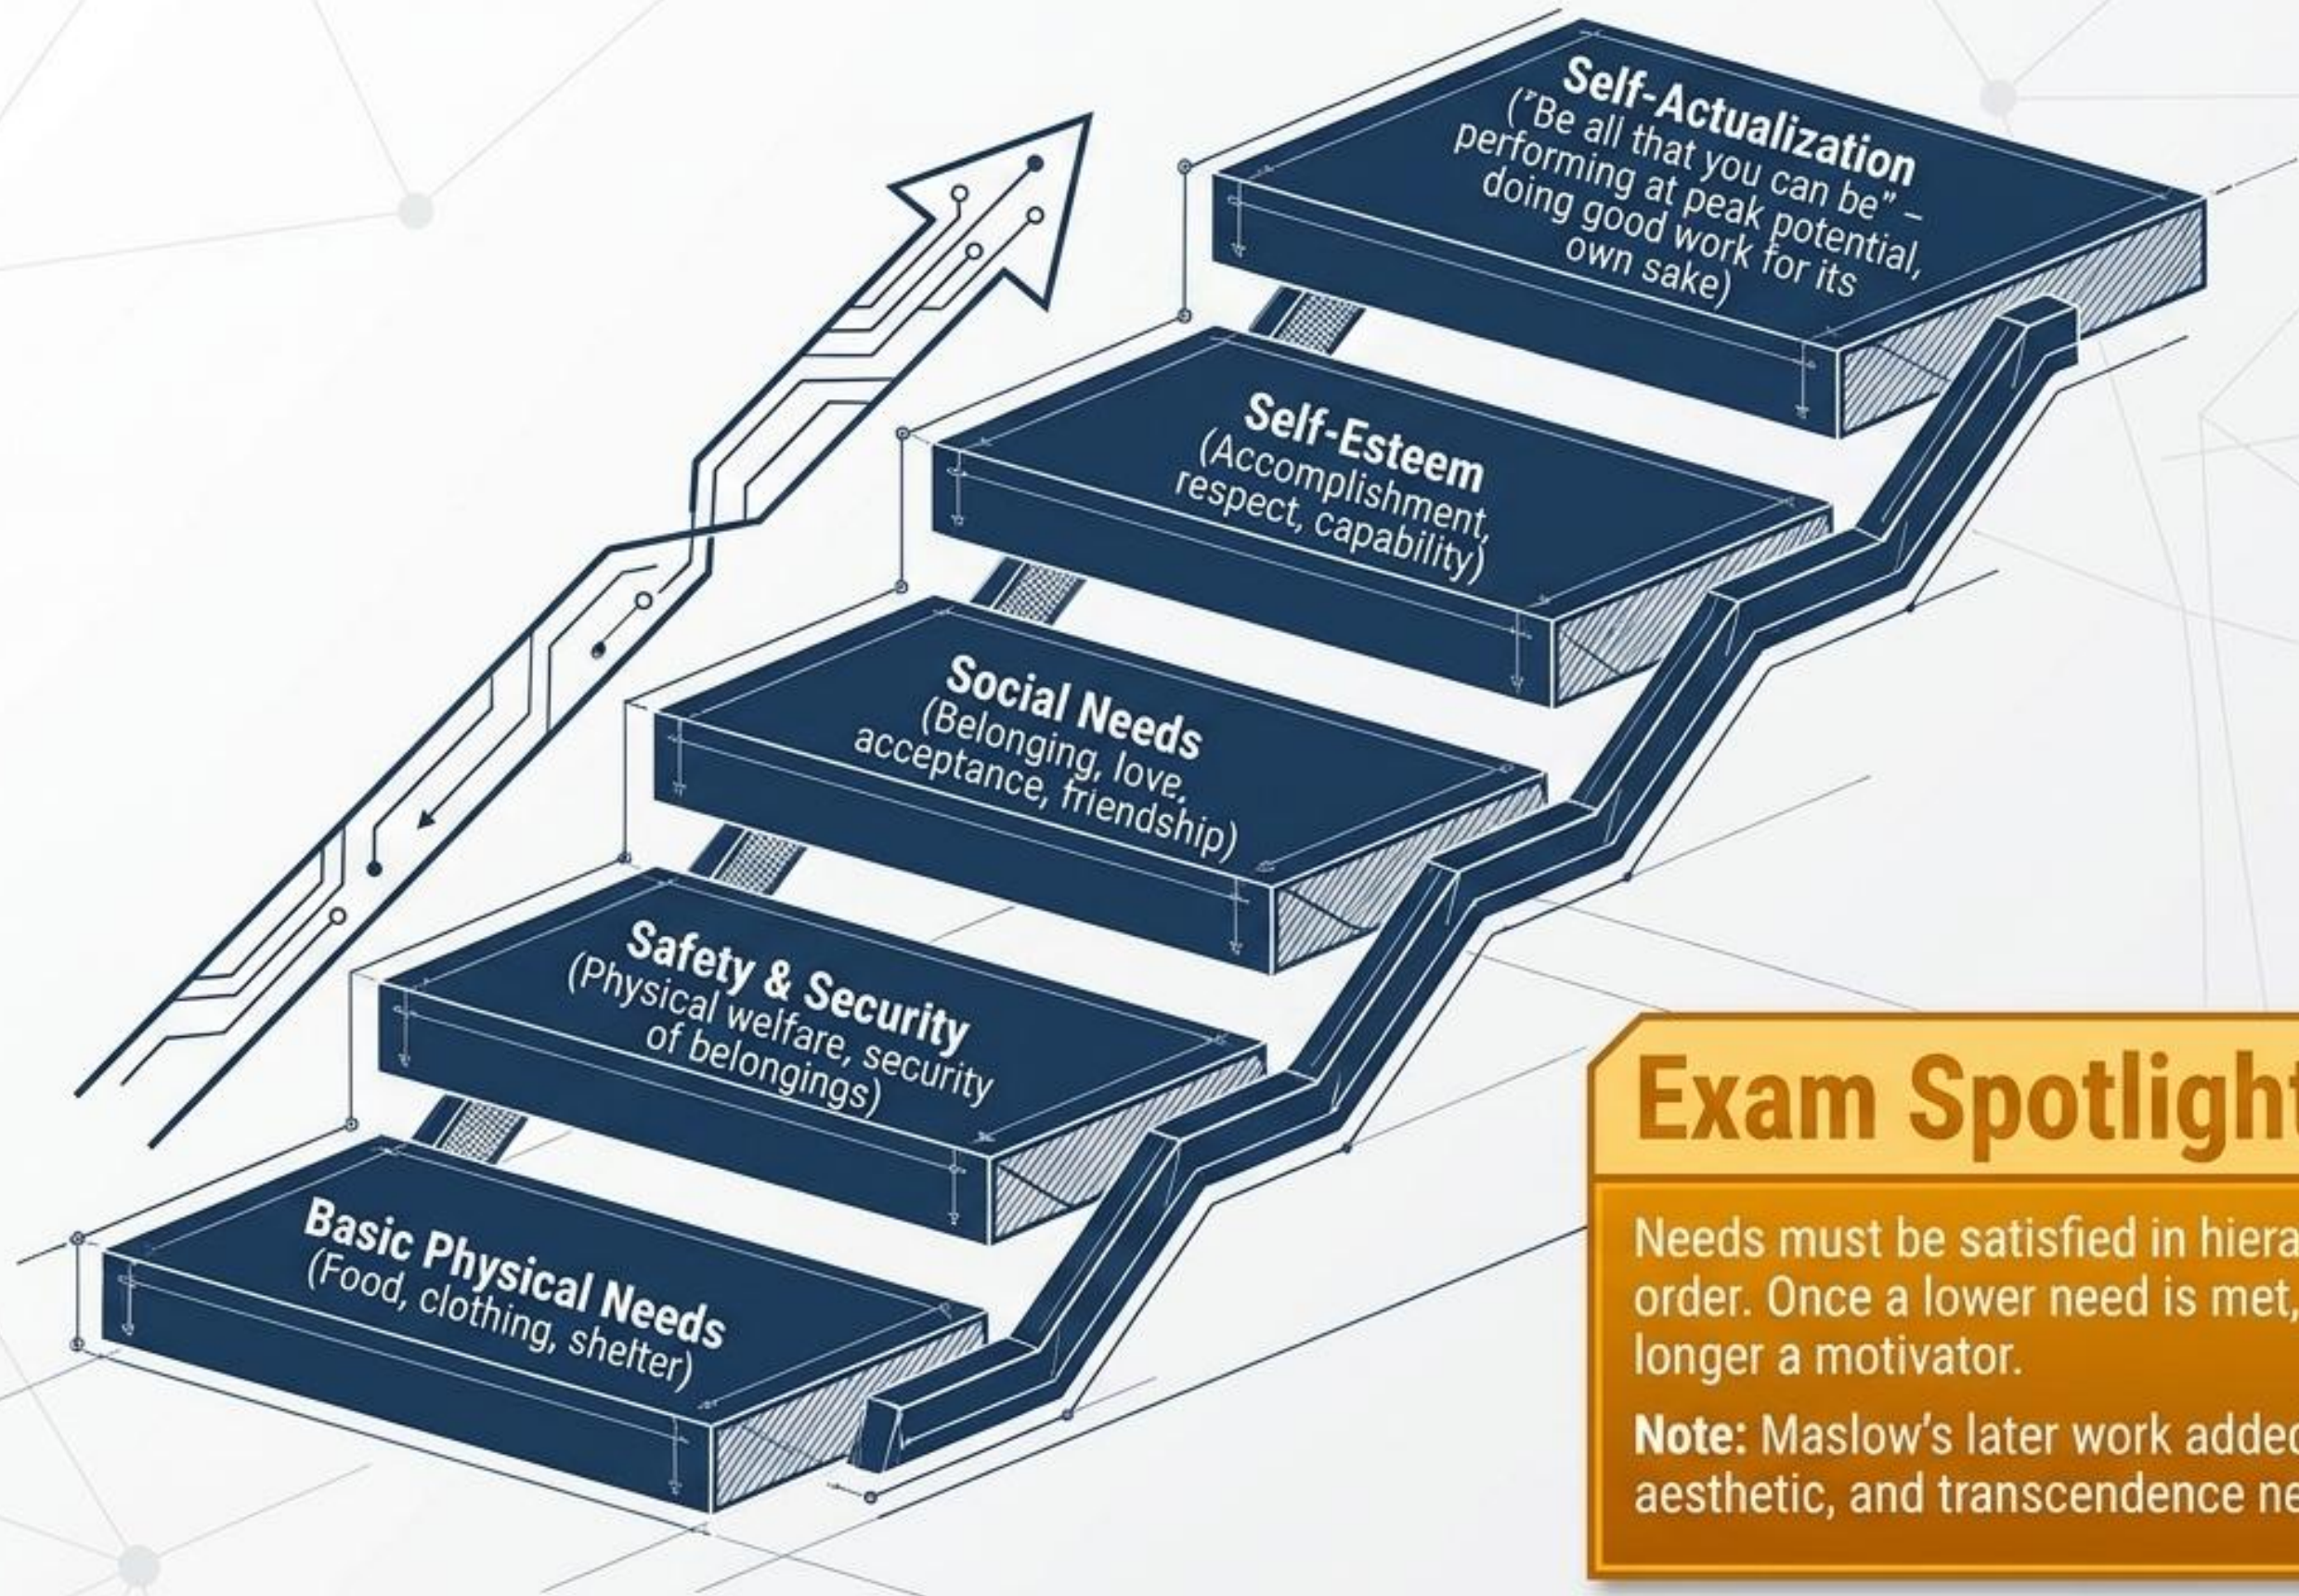

Needs evolved to job satisfaction,
team commitment, and ideal
working conditions.

Modern motivational theories explain human behavior to help PMs influence actions and achieve project results.

16:9 slide

A successful Project Manager must master both the internal drivers of their team and the external application of influence.

Exam Spotlight

Needs must be satisfied in hierarchical order. Once a lower need is met, it is no longer a motivator.

Note: Maslow's later work added cognitive, aesthetic, and transcendence needs.

HYGIENE FACTORS

Function: Prevents Dissatisfaction.

- Work environment
- Pay and benefits
- Peer/manager relationships

Rule: Pay is NOT a long-term motivator, provided the system is equitable.

MOTIVATORS

Function: Leads to Satisfaction.

- Challenging work
- Opportunity to learn new skills
- Ability to advance

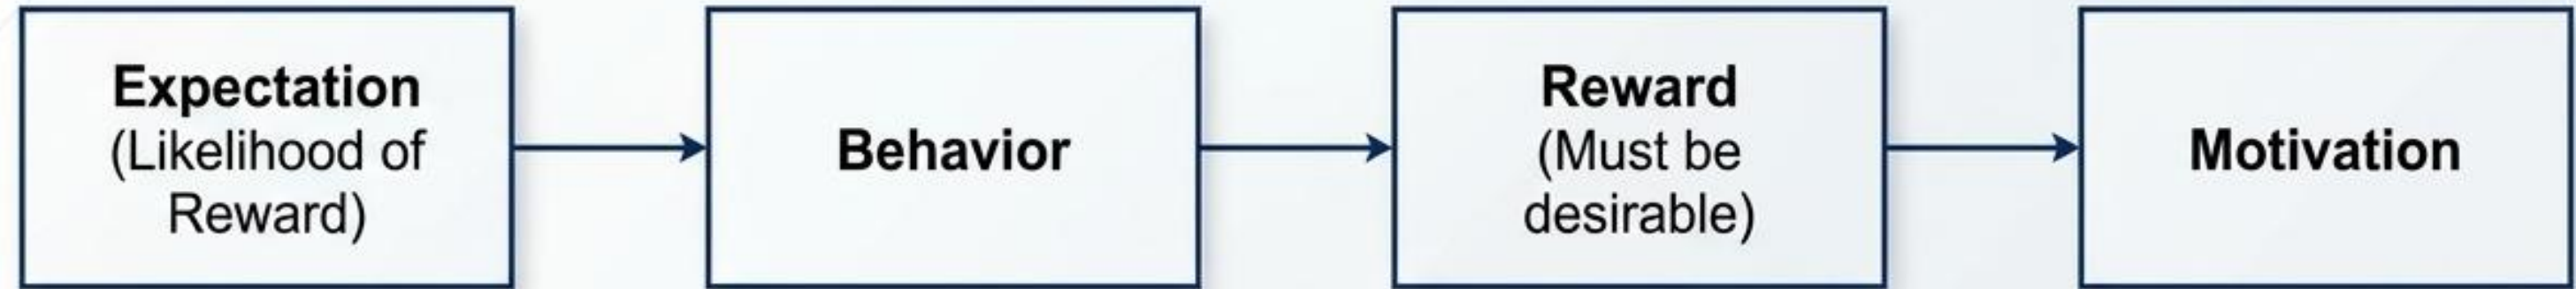

Herzberg = Hygiene Theory.

Remember: Hygiene prevents dissatisfaction; Motivators create satisfaction.

VROOM'S EXPECTANCY THEORY

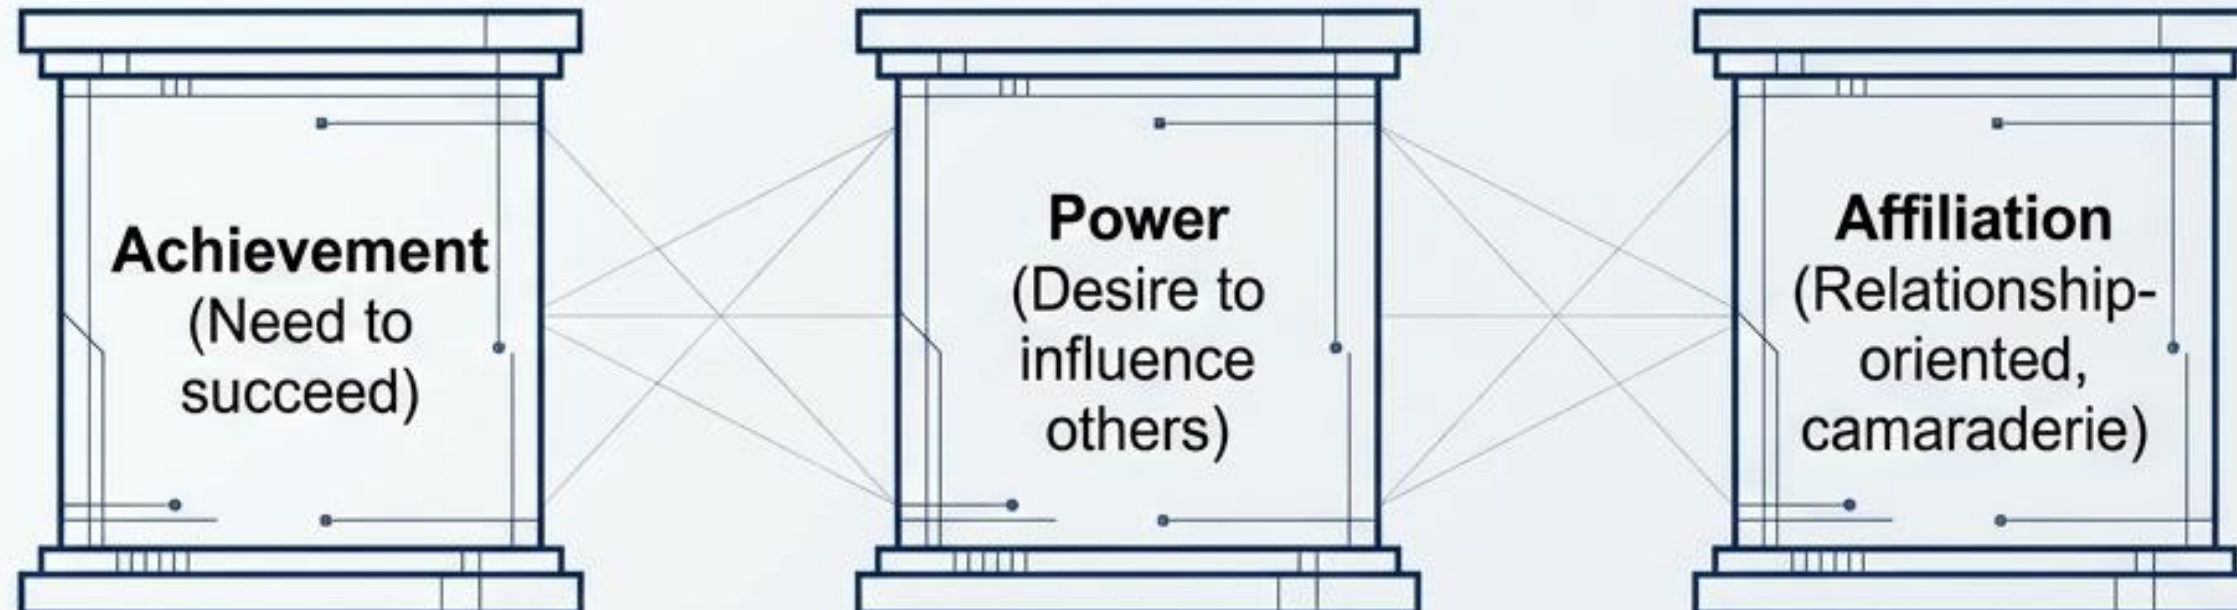

Exam Spotlight

Vroom = Expectation drives motivation.
McClelland = Achievement, Power, Affiliation.

The strength of the expectancy drives the behavior. People become what you expect of them (praise yields high performance, criticism yields low).

MCCLELLAND'S ACHIEVEMENT THEORY

Leaders

Focus: Strategic vision.

Action: Imparts vision, rallies people, motivates, and inspires.

Tools: Uses power and politics; earns loyalty, respect, and cooperation.

Approach: Directive but gathers feedback; high interpersonal skills.

Managers

Focus: Task-oriented.

Action: Plans, controls, budgets, creates policies/procedures.

Tools: Satisfies stakeholder needs, recognizes and rewards behavior.

Approach: Generalists with a broad base of organizational skills.

Project Managers must use both. Large projects require **Leadership** (inspiring sub-managers); Small projects require **Management** (planning and coordinating).

Exam Spotlight

X = Authoritarian, Y = Participative,
Z = Holistic, Lifetime Employment.

Theory X (McGregor)

Profile: The Dictator

- **Belief:** People dislike work, lack ambition, and avoid responsibility.
- **Action:** Imposes rigid controls, constant supervision. Believes people are motivated only by punishment, money, or position.

Theory Y (McGregor)

Profile: The Supporter

- **Belief:** People want to perform well, are creative, and seek responsibility.
- **Action:** Provides support, listens, uses limited supervision. Expects the best.

Theory Z (Ouchi)

Profile: The Loyalist

- **Belief:** Lifetime employment and holistic employee well-being drive success.
- **Action:** Increases loyalty, supports life inside and outside work, leading to high morale and productivity.

High Authority /
Low Freedom

Gradual shift of decision-making power

Low Authority /
High Freedom

Manager makes decisions
and announces them.

Team identifies problem,
determines alternatives,
makes final recommendation.

Seven levels of delegated freedom. The level chosen depends on the maturity and experience of the team. As the team matures, manager authority decreases and team freedom increases.

Situational Leadership Theory (Hersey & Blanchard)

Relationship Focus

Coaching

For employees with limited experience.
Minor functions known, but need direction for the majority of the task.

Directing

For new/inexperienced employees.
Step-by-step procedures provided.

Supporting

For experienced employees. Can complete most tasks but may need occasional guidance or questions answered.

Delegating

For highly capable employees.
Handled past tasks and unexpected issues with little to no leader input.

Task Focus

Core Premise: The leadership style used depends entirely on the situation and employee maturity.

Bernard Bass's Leadership Dichotomy

Transactional Leadership

Autocratic, activity-focused,
autonomous.

Relies on contingent
reward systems and
manages by exception.

Transformational Leadership

Relationship-focused,
collaborative, influential.

Inspires, empowers, and is
concerned with social justice,
equity, and fairness.

Autocratic:

Dictator; no team input.

Democratic (Participative):

Gathers facts; all team members
participate in decision-making.

Laissez-faire:

Opposite of autocratic; team
drives decisions with little
leader involvement.

Diagnostic Dashboard

Contingency Theory

Concept:

Builds on Theory Y and Hygiene Theory.

Rule:

People are motivated to achieve levels of competency, and will continue to be motivated by this need even after competency is reached.

Personnel Assessment Tools

Concept:

Practical application of theories to project management.

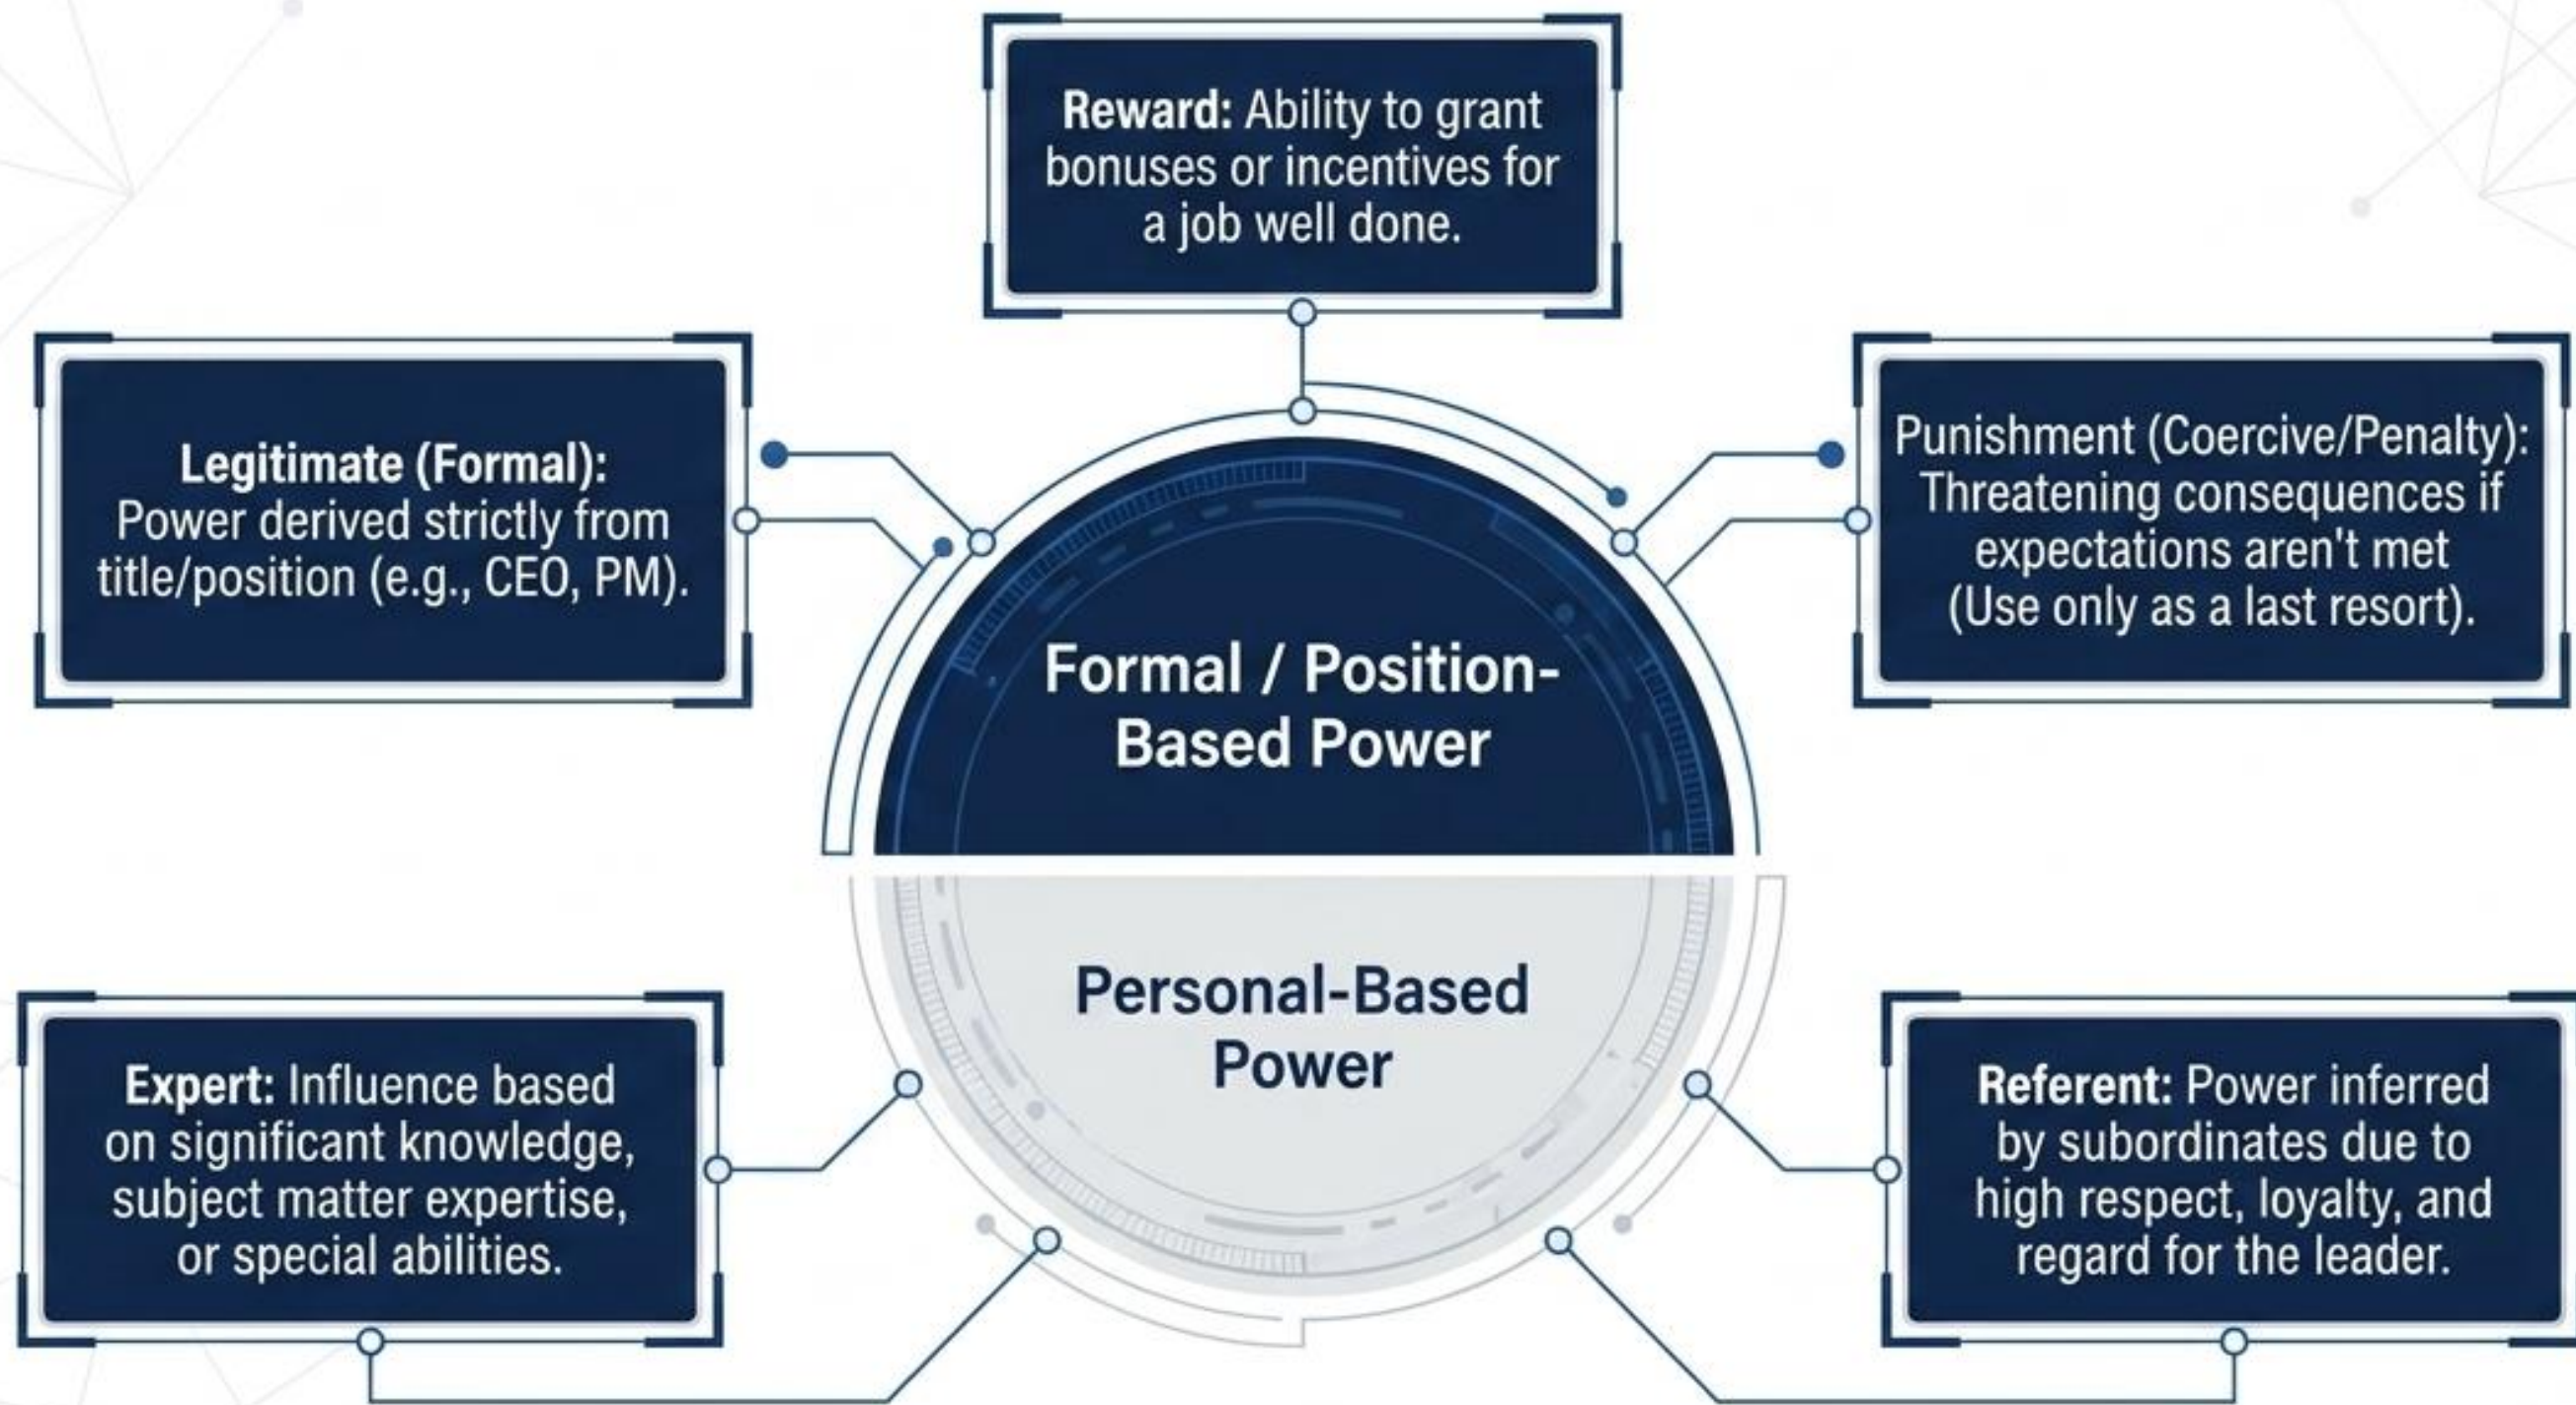

Function:

Highlights team strengths and weaknesses.

Metrics Assessed:

Communication techniques, interpersonal skills, preferences, organizational skills, and decision-making abilities.

The Wheel of Influence: 5 Types of Power

PMP® Motivation & Leadership Master Matrix

Theory Name	Author	Core Premise	Key Mechanism
Hierarchy of Needs	Maslow	Needs are hierarchical	Satisfy lower levels first
Hygiene Theory	Herzberg	Environment vs. Work	Hygiene prevents, Motivators satisfy
Expectancy Theory	Vroom	Expectation drives action	Reward must be likely and desired
Achievement Theory	McClelland	Three core needs	Achievement, Power, Affiliation
Theory X & Y	McGregor	Managerial assumptions	X=Dictator, Y=Supporter
Theory Z	Ouchi	Loyalty & holistic well-being	Lifetime focus, high morale
Situational	Hersey & Blanchard	Adapt to maturity	Direct, Coach, Support, Delegate

The Architecture of Leadership

Passing the PMP® exam requires categorizing these theories. Succeeding as a Project Manager requires understanding that you are not managing resources, you are aligning human motivation with project objectives.
