

Certyfikat PMP: Effects of Project Team Management

dr Zbigniew Galar

The Transition: Developing vs. Managing

While team development builds collective capability, team management focuses on tracking individual performance and resolving active issues.

The Engine of Team Management

Transforming project data and structural plans into actionable project updates.

The Project Manager's Toolkit

Four primary methods to assess performance, maintain alignment, and resolve friction.

1.
**Observation &
Conversation**

2.
**Project Performance
Appraisals**

3.
**Conflict
Management**

4.
**Interpersonal
Skills**

Tool 1: Observation & Conversation

Real World Scenario

The critical necessity of the “Open Door Policy.” Relying on proxy communication breaks trust and shifts team loyalty away from the Project Manager.

Communication Anti-Pattern (What Not To Do)

Loss of Authority & Missed Milestones

Communication Best Practice (Open Door Policy)

Open Door Policy: High Trust & Rapid Issue Resolution

Tool 2: Project Performance Appraisals

Structured reviews to clarify roles, set future goals, and identify training needs.

Caution: 360-degree reviews can introduce peer bias. Use constructively to clarify responsibilities rather than strictly for rating.

Structural Complexity: The Matrix Dilemma

In a matrix organization, a **lack** of Project Manager input on performance appraisals skews team loyalty entirely toward the Functional Manager.

Tool 3: The Inevitability of Conflict

Conflict is simply the incompatibility of goals. It is an inevitable reality mitigated by team ground rules and group norms.

The Conflict Resolution Matrix

Five approaches to friction. Only one yields permanent, win-win consensus.

Style	Outcome / Permanence	Key Characteristic
Force / Direct	Win-Lose Permanent	"Because I'm the boss" - Forces compliance.
Smooth / Accommodate	Lose-Lose Temporary	Emphasizes agreement over differences; buries the issue.
Compromise / Reconcile	Neutral Variable	Both parties give up something.
Withdraw / Avoid	Lose-Lose None	One party refuses to discuss.
Collaborate / Problem Solve	Win-Win Permanent	Fact-finding mission leading to true consensus.

Tool 4: Interpersonal Skills & Decision Making

Effective leadership requires timely action. Putting project goals above personal comfort means making the call.

The Decision-Making Lever

The Tangible Effects: Outputs

Outputs of Management

Soft skills and interpersonal management directly translate into updated hard project documents and enterprise assets.

Change Requests

Triggered by staffing changes or disciplinary actions.

PM Plan Updates

Adjustments to the HR or Staffing Management Plan.

Project Document Updates

Additions to the Issue Log and role descriptions.

EEF Updates

Organizational performance appraisals and personnel skill updates.

OPA Updates

Lessons learned documentation and historical templates.

Real-World Impact: The Cascade Effect

Applying the management framework to sudden personnel loss.

Summary: The High-Performing Team

The dynamic cycle of team management transforms individual contributors into a unified, high-performing unit focused on organizational goals.
