

Certyfikat PMP: Professional Responsibility of Stakeholders

dr Zbigniew Galar

The Blueprint of Trust: Navigating Ethics, Data, and Cultural Dynamics
in Global Project Management.

Responsibility

Making decisions for the good of the organization and owning consequences.

Respect

Professional demeanor, cultural awareness, and active listening.

PMI Code of Ethics

Fairness

Equitable treatment and objective decision-making.

Honesty

Truthful communication and accurate representation.

Navigating the Standards

Mandatory Standards: Strict, non-optional rules of professional conduct.

Aspirational Standards: Ideals practitioners hold themselves accountable to, even if difficult to strictly measure.

Professional responsibility is not an isolated checklist. It is the engine driving the Executing phase. Every process decision is an ethical decision.

Project Integrity

Process Integrity

Follow the PMBOK Guide

Effective execution of Planning, Executing, and Monitoring & Controlling ensures sound methodology.

Product Integrity

Complete, Sound, and Fit for Use

Achieved through documented scope, quality inspections, and taking corrective actions. Culminates in stakeholder acceptance during Closing.

Personal Conduct

Decisions for the Organization

Admitting mistakes, accepting consequences, and acting beyond self-interest.

COMPETENCY DECISION TREE

INFORMATION HANDLING MATRIX

Data Type	Definition & Scope	Project Manager's Duty
Confidential Information	Sensitive data impacting individuals or organizational privacy (e.g., bank accounts, tax records).	Sign NDAs. Never access out of curiosity; strictly limit access to project-relevant needs.
Company Data	Operational lists or internal metrics (e.g., customer mailing lists, IRS databases).	Verify vendor access rights. Do not assume intra-agency or inter-departmental access is automatically permitted. Procurement handles NDAs.
Intellectual Property (IP)	Intangible commercial assets, copyrighted works, patented industrial/business processes.	Treat like confidential data. Secure written permission or pay royalties before use. Zero personal gain allowed.

STIMULUS & RESPONSE FRAMEWORK

Proactive Leadership: Distribute policies on conflict of interest, diversity, and customer service during the project kickoff meeting to set team expectations early.

THE BLUEPRINT FOR REPORTING

Step 1: Verify the Facts

Do not report bogus or unsubstantiated rumors. Gather hard evidence of conflicts of interest, false advertising, or false credentials.

Step 2: Notify PMI

The PMP code of conduct makes all practitioners accountable to one another. Integrity of the profession relies on reporting.

Step 3: Assist the Investigation

Actively supply information, confirm dates, and provide verified facts to aid the resolution.

Example: A PMP should not have a family member reporting to them on the project team (Conflict of Interest).

CULTURAL & COMMUNICATION NORMS IN BUSINESS

The United States

Values:

Accomplishments, individualism.

Communication:

Informal, uses first names immediately, high-speed business execution.

Europe (General)

Values:

History, hierarchy, loyalty, individualism.

Communication:

Formal, utilizes surnames in business settings regardless of familiarity.

Japan

Values:

Hard work, success, group identity (over individualism).

Communication:

Indirect, collective consensus.

Golden Rule: Never force your own culture onto local hosts. Adapt to local norms (e.g., greeting with a kiss on both cheeks if customary).

Warning:
Attempting high-speed velocity in a relationship-first culture will damage relationships beyond repair. Invest time to make negotiating and problem-solving easier later.

Mitigating Culture Shock

Disorientation occurs when everyday events break expected patterns.

↳ **Solution:** Research before arrival. Ask local hosts/trusted contacts for guidance—people love to share their culture.

Shared Project Objectives

Diversity Training

Ensure cultural differences do not hinder execution.

↳ **Solution:** Inoffensive team-building activities to build mutual trust.

The Great Unifier: Keeping diverse teams **hyper-focused** on the **Project Objectives** cuts **across cultural boundaries**, centering attention on the **task** rather than the differences.

All stakeholders view the world exclusively through their own experiences.
When a misunderstanding occurs, it is rarely malicious; it is a refraction of experience.

Actionable Advice: Put personal feelings in check. Give stakeholders the benefit of the doubt. Always ask for clarification before reacting.
